Application No.: 10/568,051 Attorney Docket No.: PR60436USw

## Amendments to the Claims:

Please amend the claims as follows:

1-48. (Cancelled)

Please enter the following new claims.

49. (New) A method of manufacturing a metered dose inhaler (MDI), said method comprising:

contacting an elastomeric gasket material comprising acrylonitrile butadiene rubber and one or more extractable compounds including oleic acid, with a solution comprising a lower alcohol, wherein the solution is at a temperature of at least 40°C to extract oleic acid from the elastomeric gasket material such that the gasket material comprises between about 0.04 and 0.17% oleic acid to form a MDI scaling gasket;

providing other MDI components and a pharmaceutical aerosol formulation comprising salmeterol xianfoate and fluticasone propionate; and

assembling the MDI.

- 50. (New) The method of Claim 49, wherein at least one of the one or more extractable compounds comprises at least one additional compound selected from the group consisting of nonylphenol isomers, 2,2'-methylenebis(6-tertbutyl-4-methylphenol), 2,2,4,6,6-pentamethylhept-3-ene, 3'-oxybispropanitrile, palmitic acid, and stearic acid.
- 51. (New) The method of claim 49, wherein at least one of the one or more extractable compounds has a vapor pressure greater than 45 torr (6000 Pa) at a temperature of 20°C.
- 52. (New) The method of claim 49, wherein the solution further comprises an acid.
- 53. (New) The method of claim 49, wherein the solution has a pH less than 5.5.
- 54. (New) The method of claim 53, wherein the solution has a pH between 2.5 and 6.0.

Application No.: 10/568,051 Attorney Docket No.: PR60436USw

55. (New) The method of claim 49, wherein the lower alcohol is ethanol or isopropanol.

56. (New) The method of claim 49, wherein the solution consists essentially of ethanol.

57. (New) The method of claim 49, wherein the elastomeric gasket material is contacted with the solution for at least 1 hour.

58. (New) The method of claim 49, wherein the elastomeric gasket material is contacted

with the solution at a temperature of at least 60°C.

59. (New) The method of claim 49, wherein the elastomeric gasket material is contacted

with the solution under reflux conditions for the solution.

60. (New) The method of claim 49, wherein the elastomeric gasket material is contacted

with the solution in the presence of ultrasonic energy.

61. (New) The method of claim 49, wherein the elastomeric gasket material is contacted

with the solution under conditions sufficient to extract at least 20 percent of at least one

of the one or more extractable compounds.

62. (New) The method of claim 49, wherein the elastomeric gasket material is contacted

with the solution under conditions sufficient to extract at least 40 percent of at least one

of the one or more extractable compounds.

63. (New) The method of claim 49, further comprising agitating the elastomeric gasket

material.

64. (New) The method of claim 63, wherein the agitating of the elastomeric gasket

material is performed subsequent to the contacting of the elastomeric gasket material with

the solution.

3

Application No.: 10/568,051 Attorney Docket No.: PR60436USw

65. (New) The method of claim 63, further comprising contacting the elastomeric gasket material with the solution subsequent to the agitating of the elastomeric gasket material.
